8. Execute and display the results for the following Nmap service version and OS detection commands in Kali Linux operating systems:

i) detect the version of services running

ii) aggressive scan

iii) detect operating system of the target

AIM:

To execute and display the results of Nmap service version detection, aggressive scanning, and operating system detection commands in Kali Linux.

DESCRIPTION:

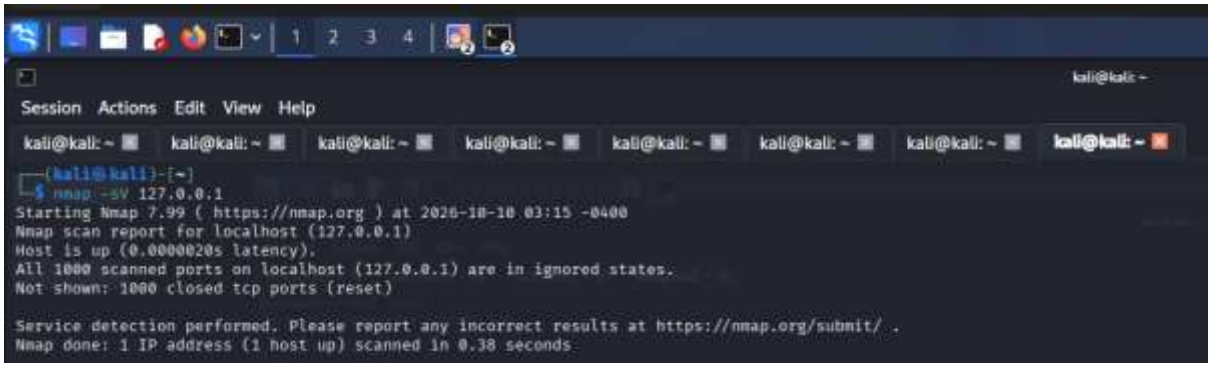

1. Detect the Version of Services Running

The -sV option is used to identify the versions of services running on open ports.

Example:

nmap -sV 127.0.0.1

Output:

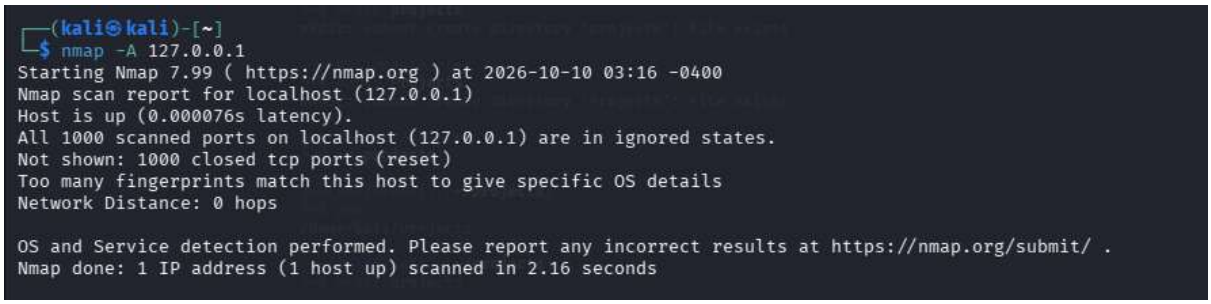

2. Aggressive Scan

The -A option enables aggressive detection, including service/version detection, OS detection, script scanning, and traceroute.

Example:

nmap -A 127.0.0.1

Output:

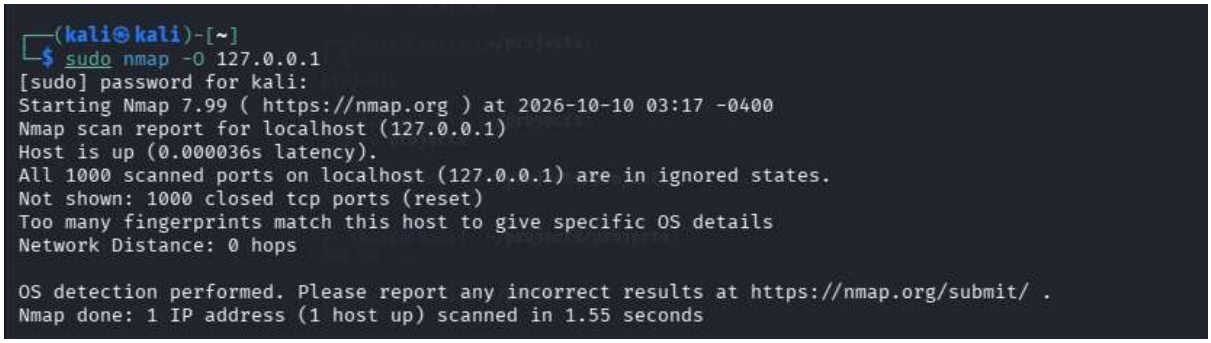

3. Detect the Operating Systemof the Target

The -O option is used to detect the target system's operating system.

Example:

sudo nmap -O 127.0.0.1

Output:

RESULTS:

The detect the version of services running, aggressive scan and detect operating system of the target commands were successfully executed in the Kali Linux operating system, and their respective outputs were observed.
